2 Risers in 1

StageRight's Telematic™ 100DX2 dual rise design eliminates the need for multiple riser systems to accommodate both hockey and basketball configurations. Changeover times are dramatically cut in addition to saving valuable storage space in your venue. StageRight risers are solid, dependable, and built to last which translates into a solid return on your investment year after year.

Premium Seating for Premium Fans

The same rock solid, composite core decks – a hallmark of all StageRight products – can be found in the new Telematic 100DX2 providing the look and feel of a permanent structure. The deck design accommodates the beam mounted Integra chair and the nose mounted Millennium chair from Irwin Seating Company, or folding chairs from any number of manufacturers. The integration of the Irwin Seating Company's line of telescopic seating brings together the number one arena seating manufacturer with the number one seating platform manufacturer providing the customer with the best in class products available in the industry.

Laser Guided

For repeatable deployment and enhanced dependability, StageRight Telematics feature laser-guided drive systems. Twin SmartDrives steer the riser with laser point accuracy every time; no binding or misaligned deployment.
